Week 2 Quiz

LATEST SUBMISSION GRADE
100%

1. What is the name of the TensorFlow library containing common data that you can use to train and test neural networks? **1 / 1 point**

- TensorFlow Data
- There is no library of common data sets, you have to use your own
- TensorFlow Data Libraries
- TensorFlow Datasets (selected)

Correct

2. How many reviews are there in the IMDB dataset and how are they split? **1 / 1 point**

- 60,000 records, 80/20 train/test split
- 50,000 records, 50/50 train/test split (selected)
- 60,000 records, 50/50 train/test split
- 50,000 records, 80/20 train/test split

Correct

3. How are the labels for the IMDB dataset encoded? **1 / 1 point**

- Reviews encoded as a number 1-5
- Reviews encoded as a number 0-1 (selected)
- Reviews encoded as a boolean true/false
- Reviews encoded as a number 1-10

Correct

4. What is the purpose of the embedding dimension? **1 / 1 point**
4. What is the purpose of the embedding dimension? **1 / 1 point**

- It is the number of dimensions for the vector representing the word encoding (selected)
- It is the number of dimensions required to encode every word in the corpus
- It is the number of letters in the word, denoting the size of the encoding
- It is the number of words to encode in the embedding

Correct

5. When tokenizing a corpus, what does the num_words=n parameter do? **1 / 1 point**

- It specifies the maximum number of words to be tokenized, and picks the first 'n' words that were tokenized
- It specifies the maximum number of words to be tokenized, and picks the most common 'n' words (selected)
- It errors out if there are more than n distinct words in the corpus
- It specifies the maximum number of words to be tokenized, and stops tokenizing when it reaches n

Correct

6. To use word embeddings in TensorFlow, in a sequential layer, what is the name of the class? **1 / 1 point**

- tf.keras.layers.Embed
- tf.keras.layers.WordEmbedding
- tf.keras.layers.Word2Vector
- tf.keras.layers.Embedding (selected)

Correct

7. IMDB Reviews are either positive or negative. What type of loss function should be used in this scenario? 1 / 1 point

- Adam
- Binary crossentropy
- Binary Gradient descent
- Categorical crossentropy

✓ Correct

8. When using IMDB Sub Words dataset, our results in classification were poor. Why? 1 / 1 point

- Our neural network didn't have enough layers
- The sub words make no sense, so can't be classified
- We didn't train long enough
- Sequence becomes much more important when dealing with subwords, but we're ignoring word positions

✓ Correct
